                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nature 390:249-256(1997).
-!- CATALYTIC ACTIVITY: 4-deoxy-L-threo-5-hexosulose uronate = 3-deoxy-D-glycero-2,5-hexodiulosonate.
-!- PATHWAY: Pectin degradation.
-!- SIMILARITY: Belongs to the kdul family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ·.

"Identification of three novel non-classical cadherin genes through
comprehensive analysis of large cDNAs.";
Brain Res. Mol. Brain Res. 94:85-95(2001).
-!- FUNCTION: Cadherins are calcium dependent cell adhesion proteins.
They preferentially interact with themselves in a homophilic
manner in connecting cells. Cadherin 23 may function as hair
bundle organizer perhaps by cross-linking the stereocilia (By

Isosub SPECIFICITY: In adult animals relatively high levels of expression are found in testis, skeletal muscle, heart, eye and thymus, and lower expression in kidney, lung and brain. Found in the sensory hair cells of the inner ear.

ISDEAASE Defects in CDH23 are the cause of Maltzer (v) phenotype. Waltzer mice are characterized by deafness and vestibular dysfunction due to degeneration of the neuroepithelium within the
"Genomic structure, alternative splice forms and normal and mutant alleles of cadherin 23 (Gdh23).";
Gene 281:31-41(2001).
-!- FUNCTION: Cadherins are calcium dependent cell adhesion proteins. They preferentially interact with themselves in a homophilic manner in connecting cells. Cadherin 23 may function as hair bundle organizer perhaps by cross-linking the stereocilia.
-!- SUBCELULAR LOCATION: Type I membrane protein (By similarity).
-!- ALTERNATIVE PRODUCTS:
EVent-Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cell adhesion; Glycoprotein; Transmembrane; Calcium-binding; Repeat; Signal; Multigene family; Alternative splicing; Deafness; Polymorphism; Disease mutation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2, Ar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 34,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                             LOGATOR TO BE ADDICATION OF STANDARD OF SEQUENCE 55, ADDICATION US/08476176B

Patent No. 5958708

GENERAL INFORMATION:

APPLICANT: Saldanha, No. 5958708man

APPLICANT: Saldanha, Jose

TITLE OF INVENTION: Immunoglobulin isotype

TITLE OF INVENTION: Seshaped monoclonal antibodies against an ITILE OF INVENTION: Immunoglobulin isotype

NUMBER OF SOCIENCES: 55

CORRESSER: No. 5958708artis Patent Department

STREE: No. 5958708artis Patent Department

STREE: No. 5958708artis Patent Department

SOUTHARE: PatentIN Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/800,198

FLING DATA: 13-FB-1997

CLASSIFICATION: DATA:

NAME: HAMLET AINO, DIANA

REGISTRATION NUMBER: 33,302

REFERENCE/DOCKET NUMBER: SCH 1576

TELECOMMUNICATION INFORMATION:

TELECOMMUNICATION INFORMATION:

TELEPAX: 703-243-6410

INFORMATION FOR SEQ ID NO: 4:

SEQUENCE CHARACTERISTICS:

LENGTH: 106 amino acids

TELNOFLOGY: linear

MOTECTIE TONE: Lanear

MOTECTIE TONE: Lanear
REFERENCE/DOCKET NUMBER: 4-19276/A/P2/CIP
TELECOMONIVICATION INFORMATION:
TELEPHONE: (908) 277-5110
TELEFAX: (908) 277-4306
INFORMATION FOR SEQ ID NO: 55:
SEQUENCE CHARACTERISTICS:
LENGTH: 9 amino acide

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The method involves treating the patients with a combination of EGER/Human EGF-1 (HER1) antagonist, optionally with a chemotherapeutic agent or radiation. The antagonist can be for example a chimeric anti-EGER monoclonal antibody, C255. The EGER/HER1 antagonist is useful for inhibiting the growth of refractory tumours such as tumours of breast, heart, lung, small intestine, colon, spipeen, kidney, bladder, head and neck, ovary, prostate, brain, pancreas, skin, bone, bone marrow, blood, thymus, uterus, testicles, cervix and liver, preferably squamous cell carcinomas. The present sequence represents the light chain variable region complementarily determining region 3 amino acid sequence of the chimeric anti-EGFR monoclonal antibody C225 which is used in an example illustrating the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epidermal growth factor receptor/human epidermal growth factor receptor-1 antagonist for inhibiting the growth of refractory tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Refractory tumour growth inhibition, epidermal growth factor receptor; BGFR antagonist, cancer; squamous cell carcinoma; anti-EGFR antibody; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anti-EGFR monoclonal antibody i chain V region CDR3 peptide sequence.

The method involves administering an antibody or a defective receptor that is an antagonist of a member of the EGF receptor family, or a combination of the antagonist and phototherapy. Chemotherapentic agent or radiation therapy. The antibody used in the method of the invention acts as an epidermal prosphorylation. The method of the invention is useful for treating a mammal with hyperproliferative disease such as psoriasis, actinic mammal with hyperproliferative disease such as psoriasis, actinic strandated by a ligand of a member of the EGF family of receptor. This sequence represents the murine anti-EGF 255 antibody light chain (LH) by pravious

The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 56; DB 2; Length 107; ilarity 100.0%; Pred. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Kappa, light chain; reshaped; monoclonal; antibody; 225RA; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region.
                                                                                                                                                                                                                                                                                                                                                      Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the kappa light chain variable region of the murine monoclonal antibody (MAb) M225, which is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells, especially conjugated to a cyctoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor. (Updated on 27-AUG-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the kappa light chain variable region of the chimeric monoclonal antibody (MAb) C225, with the modified leader sequence from the kappa light chain of L7.CL MAb. C225 is specific for the human epidermal growth factor (EGF) receptor. C225, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage special tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

scrv(225) (AAW05133) comprises the single-chain binding region of murine monoclonal antibody 225, which is specific for the human epidermal growth factor receptor. It is encoded by plasmid pWW152-225 (see also AAT42033), constructed by clonting MAD 225 whand VL region CDNAs into plasmid pWM152. Novel bivalent proteins (see also AAW05134-44), some of them including scFv(225) and an effector e.g. cytotoxin, can be produced in bacterial host cells, and are useful as antitumour agents
prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bivalent fusion proteins that bind epidermal growth factor receptor canalogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.

It is encoded by plasmid pSW202-225 (see also AAT42035) obtd. by ligating an scFv(225) gene (AAT42033) into plasmid pSW200 contg. the Pseudomonas enquinose PAK ETA gene. The construct can be used to produce novel bivalent fusion proteins (see also AAW05136-44) in bacterial host cells, for use as antitumour agents
                                                                                                                                                                                                                                                 Single chain antibody, scFv, monoclonal antibody, MAb, BGF, epidermal growth factor, receptor, plasmid pSW202-225, cancer, therapy, antitumour; exotoxin A, ETA.

scFv2(225/FRP5)-BTA (AAW05140) comprises the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth actor receptor, see also AAW05133) joined to portions of exotoxin A from Pseudomonas acruginosa and to the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor exbB-2, see also AAW05134). It is encoded by plasmid pMS238-225-5 (AAY42040). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                            Gaps

scFv2(FRP5/225)-ETA (AAW05139) comprises the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor erbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid ppS238-5-225 (AAT42039). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (sep. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                              Bivalent fusion proteins that bind epidermal growth factor receptor analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single chain antibody; scFv; monoclonal antibody; MAb; EGF; erbB-2; epidermal growth factor; receptor; plasmid pMS240-5-225; cancer; exotoxin A; ETA; antitumour.

This sequence is the light chain variable region of a preferred anti-IL2R beta monocolonal antibody for use in the claimed synergistic composition. The anti-IL2R beta antibody is used with at least one anti-CD4 antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. See AAQ36607-Q36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                          scFv2(FRPS/225)-ETA version 2 (AAW05141) comprises the single-chain binding region of murine monoclonal antibody FRPS (specific for human epidermal growth factor receptor erbB-2, see also AAW05134) joined to portions of exotoxin A from Fseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid pMS240-5-225 (AAT42041). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (esp. E. coli) host antitumour agents
                                                                                                                                                                                                                                                                                                   Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
